

Hydra Test TEHCM Tool Pre-order

Hydra-Test USA has developed the first tool that can interface with TEHCM transmissions to allow proper testing and control using the internal TEHCM similar to OEM diagnostic tools. The Hydra-Test TEHCM Tool can be used as a stand-alone unit, or it can interface with transmission dynamometer or other test stand controls.

Hydra-Test is currently working on production of the first batch of TEHCM Tools. Current supply chain constraints have put this at an estimated ship date of 4 months. Units will be shipped on a first come first served basis.

During this pre-order phase, the TEHCM tool will be offered at the fixed price of \$6,500 each for customers participating in the pre-order. Customers who order after the pre-order will pay current prices at time of order.

The optional 6L application firmware and adapter cable will also be offered at the fixed price of \$1,250 each for customers who will pre-order the TEHCM tool.

TEHCM Tool with/without the 6L application software pre-order deposit is \$2,000

The Hydra-Test TEHCM Tool comes with a 1-year warranty and free firmware updates for 1 year on both the tool and the 6L application.

I hereby consent to pre-order the TEHCM tool:
